

## Pro Sportsfield Elite Blend Rejuvenates Vanguard College Ball Fields

The Vanguard University ball fields get an especially hard workout during baseball and softball season, but are often utilized year-round. When it came time for seasonal turf rejuvenation, the University grounds management team selected Pro Sportsfield Elite a specialty sportsfield mixture from Stover Seed that would provide the best combination of quick establishment, durability and attractiveness in all seasons.

The result is a tough yet attractive, deep blue, fast germinating turf that can withstand low mowing and thrive in a broad range of temperatures. The mixture includes Del Sol, an improved variety of Bermuda Grass that helps maintain a dense, fine turf perfect for ball fields.

In addition, Pro Sportsfield Elite contains a high endophyte level which means that the resulting turf exhibits natural insect-repelling qualities.
