# Good year-round turf color in hot and cool temperatures from Pro Sportsfield Elite

California Baptist University, a private college environment in Riverside, California was seeking a year-round beautiful look for their campus.

Stover Seed suggested Pro Sportsfield Elite which contains 3 types of perennial rye grass and improved Bermuda grass. During the summer months the Bermuda is the dominant grass; it will grow vigorously and repair worn turf. In the winter the Bermuda goes dormant and the Rye becomes the dominant turf—so good color exists year round. Also, their choice was based on a blend that would perform in high heat and cooler temperatures.

For the sportsfields at California Baptist, they use Pro Sportsfield Elite and then over-seed with Grand Slam Saline. The University continues to be pleased with their turf performance year after year.
