

Technical Data Sheet

Wildfire Seed Mix #4™

Description & Specifications

Wildfire Seed Mix #4 contains fast establishing, reseeding annual legumes and wildflowers. Description of the species used:

80% *Trifolium incarnatum* / Crimson Clover: Easy to establish annual, 6 to 30 inches high.

10% *Dimorphotheca aurantiaca* / African Daisy: The most widely used revegetation grass for erosion control and wildfire seeding in California. It has excellent drought tolerance needing only 10 inches of rainfall per year. It establishes rapidly and reseeds vigorously. Grows 12 – 24 inches high.

5% *Lupinus succulentus* / Arroyo Lupine & 5% *Eschscholzia californica* / California Poppy: Popular native wildflowers add winter and spring color as well as soil binding properties.

Uses

Wildfire Seed Mix #4 Recommended for burn areas near the home, on previously landscaped areas and as a cover crop for larger shrubs and trees.

For Natural areas without irrigation, seed during fall and winter in advance of rains. Can be established anytime with irrigation. Perennial grasses can stay green in summer months if occasionally irrigated. Results are best if seed is covered with 1/2 inch of soil. Seeding rates should be increased if soil coverage is difficult or impossible

Seeding Rates

For non-slope areas plant 10 pounds per acre or 4 ounces per 1,000 square feet.

For slope areas plant up to 25 pounds per acre or 10 ounces per 1,000 square feet.
