

## Grand Slam 'FS' at City of Anaheim Ball Field

When the City of Anaheim's Parks and Recreation Department needed a hard-wearing turf for its municipal ball field, they turned to the professionals at Stover Seed for a solution. The city required a high density turf with good recovery characteristics and optimal year round performance.

After meeting with Stover Seed consultants, Grand Slam FS was selected. This Perennial Ryegrass blend contains three recently developed

Ryegrass cultivars that exhibit improved rates of germination and establishment, and show exceptional tillering (spreading) growth. Grand Slam FS can be planted year-round, and is perfect for sportsfields and other high-traffic areas. In addition to these benefits, Grand Slam FS

exhibits improved disease resistance, is Grey Leaf Spot resistant, and provides consistently top-notch turf quality and color.
